

Jahnvi Nalla

jnalla@asu.edu | (602) 706-4279 | <https://www.linkedin.com/in/nalla2002/>

Skills

Programming Languages:	TypeScript, JavaScript (ES6+), Java, Python, C#/.NET, SQL, HTML5, CSS3, JSON, XML
Frameworks & Libraries:	React 19, Redux Toolkit, Node.js, Hapi.js, Angular, ASP.NET Core, Tailwind CSS
Cloud & DevOps:	AWS (Lambda, SQS, DynamoDB, S3, EC2, CDK), Docker, GitLab CI/CD, Vercel
Databases:	MySQL, PostgreSQL, SQL Server, DynamoDB, NoSQL
APIs & Security:	RESTAPI, Swagger / Open API, JWT, OAuth 2.0, RBAC, Joi validation
AI / ML:	OpenAI SDK, LLM integration, prompt engineering, time-series forecasting (Chronos, TimesFM)
Software:	Git & GitHub, GitLab, Postman, JIRA, Agile / Scrum, test-driven development

Work Experience

Arrant Technologies

Dallas, TX

Software Development Engineer

December 2025 - Present

- Design and develop a commercial clean-room management web application serving 6 enterprise clients - React 19 + TypeScript frontend against a Node.js / Hapi.js REST backend over a normalized MySQL schema
- Built a real-time telemetry and data-routing service streaming operational metrics across 9 endpoints using AWS Lambda, SQS, DynamoDB, and CDK, improving metric freshness by ~50%
- Documented every REST route in Swagger and enforced Joi schema validation at the API gateway, rejecting malformed payloads before they reached the database
- Hardened authentication for 60+ users with JWT, bcrypt hashing, refresh-token rotation, and rate limiting, sharply reducing successful unauthorized-access attempts
- Built GitLab CI/CD pipelines with automated Postman API tests gating each deployment
- Integrated the OpenAI SDK for in-product recommendations with prompt guardrails and response validation
- Conducted knowledge transfer to interns and support-facing teammates on requirements analysis and code standards

Software Development Engineer Intern & Co-op

May 2025 - December 2025

- Built reusable React + TypeScript UI components (Dashboard, Client Details, Rooms, Results) styled with Tailwind CSS, with application state managed through Redux Toolkit
- Implemented service-layer logic converting user inputs into validated, ISO-compliant room-specification metrics feeding auto-generated BOQ Excel reports
- Assisted senior engineers in developing serverless AWS Lambda functions coordinated through SQS and DynamoDB, and wrote Python and Java scripts for data processing

Education

Arizona State University, Tempe, AZ

December 2025

M.S. in Information Technology; GPA 3.74/4.0

Relevant courses: Fund. SWE, web development, OOPs, adv. DBMS, data structures, Cloud Architecture, Security policies, AI in cyber security

B V Raju Institute of Technology, Hyderabad, India

May 2023

B.Tech in Computer Science Engineering; GPA 8.6/10

Additional Projects

PRISMA — Enterprise AI Platform for Demand Forecasting & Supply-Chain Intelligence (Founder)

2025 - Present

- Building an enterprise AI platform that helps organizations forecast demand, optimize inventory, and improve supply-chain decisions using predictive analytics and machine learning
- Lead product strategy, architecture, and roadmap for a multi-tenant SaaS platform- C# / ASP.NET Core backend, Angular frontend, SQL Server, covering multi-tenancy, security, and cloud deployment
- Designing AI forecasting pipelines using time-series foundation models (Chronos, TimesFM) and ensemble learning, with real-time signal intelligence from market trends and external data sources
- Developed inventory-optimization and replenishment recommendation engines while driving customer discovery and market planning

Certifications & Additional Details

- AI fluency, Claude 101 – Anthropic Certifications
- Cloud operations, cloud security Foundations- AWS academy Certification
- Campus partner – perplexity (educated peers on advantages of using perplexity)
- Volunteer – Foster your future (Maintained their webpages)
- Interests: Athlete, Running, strength training, reading books, Carnatic Music- singer
